Cylinder Ring Place Holder

Description

A device to hold cylinder molds in place while making concrete test strength cylinders. The device can be placed on or off after to make for easy cleaning.

Project Initiation

Needed to figure out a way to keep concrete test strength cylinders in place.

Project Benefits

The Cylinder Ring Place Holder ensures that cylinders are secure and in place every time they are made. Cylinders are one of, if not the most important testing QC is responsible for, so this ring gives us peace of mind knowing cylinders are made properly.
