

Individual Plant Process Improvement

UHMW Blocks

Description

We used to damage the boxes from time to time when performing the fit test for the DOTD. To solve the problem, we started using 4x4 UHMW blocks for our box fit test. The blocks let the boxes slide smoothly together without any restrictions from being directly on the ground. It also allows us to shim them in the spots where the concrete isn't level anymore due to it settling.

Project Initiation

We used to damage the boxes from time to time when performing the fit test for the DOTD.

Project Benefits

The blocks let the boxes slide smoothly together without any restrictions from being directly on the ground. It also allows us to shim them in the spots where the concrete isn't level anymore due to it settling.
